

Panasonic

Panasonic knows just how important your home is. That's why we develop technologies that make your home safer, more comfortable, more convenient and more connected. Now we're making it easier than ever to power your home with clean, renewable energy. You'll contribute to a greener, more sustainable future while reducing your family's energy costs.

### Why Panasonic?

A leader in consumer electronics, business solutions and industrial components, Panasonic has been in the solar industry for 40 years, providing high-efficiency and high-quality solar panels.

#### 25-Year Product Warranty

An Industry-leading 25-year product workmanship and performance warranty is backed by a century-old company. Panasonic guarantees that your HIT<sup>®</sup> panel will provide 90.76% power output after 25 years. That's 13% more guaranteed power than what's offered by a traditional solar panel warranty. Your investment in clean energy is safe for decades to come.

#### 25-Year Enhanced Labor and Shipping Warranty

Panasonic is so confident in its product that we back your HIT<sup>®</sup> panel with an enhanced labor warranty when the system is installed by a Panasonic Solar Authorized Installer. This not only covers the cost of the panel, but shipping and installation as well. Other companies make you responsible for freight charges. With Panasonic, you're protected every step of the way.

#### Built for the Long Haul

Panasonic performs over 20 internal tests beyond those mandated by current standards, testing the panel in some of the most extreme conditions imaginable. We go the extra mile to ensure your HIT<sup>®</sup> panel performs as promised.

#### High Efficiency Means More Savings

Not only are HIT<sup>®</sup> panels sleek and attractive but they're also among the most efficient you can find. Proprietary and patented technology assures optimal performance—even at high temperatures. Panasonic converts sunlight into more electricity, so you not only save on your monthly energy bill, but contribute to a cleaner, greener planet.

#### Looks Great on Any Roof

Gone are the days of silver frames, blue cells and a white grid lines. HIT<sup>®</sup> panels feature a laser-crafted, solid black frame with dark, polished cells. Those seeking the most attractive solar panel available choose the all black module, while others who desire maximum performance lean towards our highest efficiency model. Sophisticated solar designers have found creative ways of using these modules together in a single unified system.
